

**Before installing or removing your Ducting Kit, ensure your Power Breezer is powered off.**

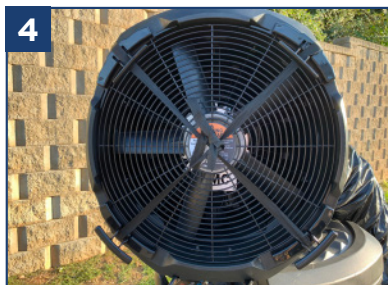

Slide larger end of the ducting over the front edge of the Power Breezer head with the tie straps approximately aligned where the head handles are.

Feed each of the (4) tie straps through the head's handles as shown.

Using opposite tie straps, tie the two ends together. Repeat for the other set of tie straps.

Your Power Breezer Ducting Kit is now ready to be used.

### MAINTAINING YOUR DUCTING KIT

When your Ducting Kit is used with the Power Breezer's atomizing feature, moisture may build up inside the ducting. We recommend drying your Ducting Kit daily.

- If not already on, power on the Power Breezer.
- Turn off the atomizing feature.
- Increase fan speed and let unit run until ducting is dry.
- Remove ducting to drain if needed.
